- 6.nominal

**Definigion**

- 2.Unambiguous Words-words in a questionnaire should have a single meaning
- 3.leading or biasing questions -lead respondent to one side or clue to respond
- 4.implicit alternatives -an alternative that is not explicitly expressed in the options
- 5,implicit assumptions – are assumptions that are not stated in question
- 6.generalization and estimations -questions should be specific,not general,compute estimates

**4.Is the order questions Proper? Evaluate**

A questionnaire, like a conversation, should be grouped by topic and unfold in a logical order. It is often helpful to begin the survey with simple questions that respondents will find interesting and engaging. Throughout the survey, an effort should be made to keep the survey interesting and not overburden respondents with several difficult questions right after one another. Demographic questions such as income, education or age should not be asked near the beginning of a survey unless they are needed to determine eligibility for the survey or for routing respondents through particular sections of the questionnaire. Even then, it is best to precede such items with more interesting and engaging questions
